# UT30

**Universal Lower Body Scattered X-Ray Protection**  
for OR Tables

**MAVIG**

**MAVIG Lower Body Protection Systems**  
for operating tables close a gap in radiation  
protection.

**The panels for the area beneath the table**  
are universally adaptable and can be  
combined to fully meet all requirements.

# UT30

Frequently, conventional lower body protection devices are not compatible for the majority of operating tables such as intracardiac catheter tables.

In particular, operating tables with tiltable segments require individual solutions.

For many years now, MAVIG offers with the UT30 a technical solution for optimal radiation protection of the lower body for the users of nearly all models of operating tables.

The radiation protection panels synchronize to all movements of the table, effectively protecting the medical staff.

The MAVIG UT30 system makes it possible to attach panels to the table individually. In a single step they are fixed securely and overlapped for safety.

Individually attachable panels provide maximum flexibility to meet all requirements for the area that has to be protected. The overlapping of the panels ensures solid shielding.

The UT30 does fully meet the hygienic standards. The panels are entirely enclosed and heat-sealed. It was our goal to develop a product that can be easily cleaned and disinfected.

The universal adapter has been designed for table rails measuring from 7 x 25 mm up to 10 x 30 mm (WxH).

*On request we can also manufacture customized solutions for differing rail measurements.*

The universally applicable set, consists of 3 panels adaptable to table rails with dimensions ranging from 7 x 25 mm up to 10 x 30 mm (W x H). They all have a lead equivalent value of 0.50 mm Pb according to IEC 61331-1:2014 / DIN EN 61331-1:2016 in a X-ray tube voltage range of 50 - 150 kV.

On request we can manufacture the lower body protection system to fit tables with different rail measurements.

## Universal Lower Body X-Ray Protection for Operating Tables

The UT30 adapter fits unsiversely for OR-table rails ranging from 7 x 25 mm up to 10 x 30 mm (WxH). The radiation protection panels are securely held in place.

The design of the panel bracket ensures that all movements of the table are synchronously followed.
